KrishiMitra AI

Solar soil sensors + WhatsApp crop advisory for India's smallholder farmers

- KrishiMitra AI Private Limited
- CIN U62099MH2024PTC410567 · Pune, Maharashtra · Incorporated 2024
- Seed round: raising Rs 12 crore at Rs 60 crore pre-money
- Team: Arav · Mahi · Kartik · Adesh

Problem

- 146 million agricultural holdings in India; ~86% are smallholders farming under 2 hectares (Source: Agriculture Census 2015-16).
- Smallholders lack affordable, real-time soil and irrigation data, leading to 20-30% avoidable input waste on water and fertiliser.
- Existing advisory apps are English/UI-heavy and priced for agri-businesses, not for a farmer earning Rs 8,000-12,000 per month.
- Language barrier: most advisory content is not available in Marathi or Hindi voice/text.

Solution

- Rs 1,499 solar-powered soil sensor: measures moisture, temperature and NPK proxy.
- WhatsApp crop-advisory subscription in Marathi and Hindi (text + voice notes).
- AI advisory tuned to local crop calendars: sowing, irrigation timing, pest alerts.
- No smartphone app install required — runs entirely inside WhatsApp.

Market Opportunity (TAM / SAM / SOM)

- TAM — India Agriculture IoT market: USD 82.3M in 2025, projected USD 154.8M by 2030 at 13.5% CAGR (Source: MarketsandMarkets, India Agriculture IoT Market 2025-2030).
- SAM — Marathi/Hindi smallholder segment (Maharashtra, Karnataka, MP): USD 24.7M in 2025 (~30% of India Agri-IoT TAM, company estimate).
- SOM — 3-year obtainable share of SAM: USD 3.7M in 2028 (~15% of SAM, company projection).
- India agri-IoT segment CAGR: 13.5% (2025-2030).

Business Model

- Hardware: Rs 1,499 one-time solar soil sensor (32% of revenue).
- Subscription: Rs 149/month WhatsApp advisory (68% of revenue).
- Subscription gross margin: 78%.
- Blended CAC: Rs 610 · Payback period: 4.1 months.

Traction (as of FY2025)

- 12,400 paying farmers across 9 districts of Maharashtra.
- ARR: Rs 3.1 crore in FY2025 (68% subscription, 32% sensor sales).
- Net Revenue Retention (NRR): 121%.
- Monthly churn: 2.4%.

Unit Economics

- CAC: Rs 610 per farmer.
- Payback: 4.1 months.
- Subscription gross margin: 78%.
- NRR 121% with 2.4% monthly churn implies strong expansion within cohorts.

Competitive Landscape

- Fasal — IoT sensors + AI for horticulture (B2B/premium farms).
- Cropin — agritech SaaS, Rs 38.5 crore revenue FY25 (enterprise focus).
- DeHaat — full-stack agri platform (~USD 800M valuation reference).
- BharatAgri — B2C farm advisory, shut down 2025 amid funding crunch: our moat is low-cost hardware lock-in + vernacular WhatsApp distribution.

Go-to-Market & Expansion

- Proven in 9 Maharashtra districts via village-level agri-retailer partnerships.
- Seed capital funds expansion into Karnataka and Madhya Pradesh.
- Channel: agri-input dealers, FPOs (Farmer Producer Organisations), NABARD-linked programs.
- Target: 40,000 paying farmers across 3 states within 24 months.

Team

- Arav — Co-founder (Product & AI).
- Mahi — Co-founder (Field Operations & Distribution).
- Kartik — Co-founder (Hardware & Supply Chain).
- Adesh — Co-founder (Growth & Partnerships).

The Ask

- Raising Rs 12 crore seed at Rs 60 crore pre-money (Rs 72 crore post).
- Implied ~19x ARR multiple on Rs 3.1 crore ARR.
- Use of funds: 45% distribution/expansion, 30% product & AI, 15% hardware, 10% working capital.
- Milestone: 40,000 paying farmers and Rs 10 crore ARR within 24 months.
